A solid and dynamic color palette that reflects the values of innovation, energy, and future vision. Each color has been chosen to ensure consistency, accessibility, and recognizability.

Our primary color palette consists of pure black and white. It forms the neutral foundation of the visual system, essential to ensure clarity, structure, and legibility.

This color pair enables a strong and versatile visual hierarchy that adapts across applications, enhancing the impact of the brand's accent colors.
Black and white also symbolize transparency and method—offering a clean backdrop where content can take the lead and data can be communicated with precision.

At the heart of OpenEconomics’ color system lies Bluette: a bright, tech-forward, and authoritative tone that effectively conveys innovation, energy, and future vision. It’s a strong and contemporary hue that maintains personality and clarity across various visual contexts—whether paired with typography, icons, or imagery.

Supporting it, Lime brings a vibrant and electrifying edge: a color that speaks to bold innovation, positive urgency, and proactive energy. Lime reinforces the brand’s more distinctive and dynamic side, expanding the expressive potential of the palette.

Together, Bluette and Lime form a recognizable, coherent, and flexible color combination—capable of adapting to different design languages while staying true to the identity and impact of OpenEconomics.

To further enhance Bluette as the brand’s core identity color, we developed a tonal scale of five shades—ranging from deep and structured to light and luminous.

This gradient approach allows for modular and functional use of the color, enabling clear visual hierarchies and versatile applications, from institutional backgrounds to vibrant highlights.

By softening the base tone’s perceived coolness, the tonal range adds warmth and emotional depth, expanding the palette’s expressive potential while maintaining consistency with the visual identity.

The Web Content Accessibility Guidelines (WCAG) set specific criteria to ensure that the colour contrast between text and background is adequate, making content easier to read for all users, including those with visual impairments. Sufficient contrast not only enhances accessibility but also contributes to a clearer and more inclusive user experience.

This chart represents the appropriate text colors for text set on secondary and supplemental background colors.

This chart presents the full color spectrum used in our visual system, including primary colors, secondary tones, and their corresponding shades.

Each hue has been carefully selected to ensure consistency, accessibility, and recognizability across all brand applications - from digital interfaces to print materials.

The modular structure of the shades allows for flexible and hierarchical color usage, adapting to different contexts while maintaining a strong and distinctive visual identity.
